SUMMARY

Frontend engineer with 5+ years building production React applications for enterprise and real-estate platforms: server-rendered apps (React Router 7, Remix), multi-brand design systems, bilingual (English/Arabic, RTL) and accessible UIs, and secure authentication flows (OAuth 2.0, enterprise SSO, 2FA). Comfortable across the stack when the work needs it: Node.js services and bots, REST API design with backend teams, CI/CD pipelines and test strategy. Daily user of AI-assisted engineering (Claude Code, MCP, parallel agents in git worktrees) to deliver large, well-tested changes quickly without lowering the bar on quality.

SKILLS

Frontend: React 18/19, TypeScript, React Router 7 (framework mode, SSR), Remix, Next.js, TanStack Query, Redux Toolkit, React Hook Form, Zod, Emotion CSS, Tailwind CSS, Framer Motion, Storybook, i18next (i18n, RTL), Web accessibility (WCAG, ARIA), Vite

Backend and APIs: Node.js, REST API integration and contract review, OAuth 2.0 / OIDC (Microsoft Entra ID, ForgeRock), JWT session management, Strapi CMS, Firebase, Microsoft Bot Framework, Redis

Quality: Vitest, React Testing Library patterns, Playwright (browser automation, failure injection), Lighthouse, ESLint, Prettier, Snyk, SonarQube

Platform and tooling: GitLab CI/CD, Docker, pnpm, Git (worktrees, rebasing, stacked MRs), GCP, Figma design tokens (Token Studio), Google Analytics, custom telemetry

AI-assisted engineering: Claude Code, Model Context Protocol (Figma, GitLab, docs), multi-agent orchestration in isolated git worktrees, writing engineering briefs and acceptance checks for agents, AI-driven regression and QA passes

EXPERIENCE

TechMojo Solutions Private Limited

Aug 2022 – Present

Member of Technical Staff – Frontend | Hyderabad, India

ROSHN Tenant Experience Portal (TXP) – B2B leasing portal for tenants and operators 2026 – Present

- Lead frontend engineer for a bilingual (English/Arabic) web portal where retail tenants manage their stores, raise service requests and follow announcements, and ROSHN's leasing team runs operations; built on React Router 7 (SSR), TypeScript and TanStack Query.
- Owned sign-in and security end to end: two-factor login, password reset, role-based access, and enterprise single sign-on with Microsoft Entra ID and ForgeRock, coordinating the Azure, identity and backend teams to get it live.
- Ran a full regression pass ahead of release and fixed 100+ issues in one coordinated change, including a blocking store-setup failure, duplicate photo uploads and a stored-XSS security gap.
- Raised release confidence: unit tests from about 420 to 730, browser-based QA with Playwright (about 120 real-user scenarios such as offline, slow network and bad input), and CI checks for lint, types and tests on every merge request.
- Made pages faster and safer with server-side caching of CMS calls and by moving secrets out of the browser bundle; made photo uploads reliable with on-device image reduction.
- Refactored the largest screens (up to 1,100 lines) into small, reusable components shared across the app, removing about 1,500 lines of duplicated code with no change in behaviour.

ROSHN.com and ROSHN Design System (RDS) Jan 2024 – 2026

- Engineered the public ROSHN real-estate web application end to end with React, Remix (SSR) and Strapi CMS: full localization, RTL support, accessibility and mobile-first responsiveness.
- Built a multi-brand design system from scratch (Atomic Design, Storybook, Emotion) with Figma design tokens integrated through Token Studio, enabling runtime theme switching across several corporate frontends; continue to contribute fixes and components to the shared UI kit.
- Used Strapi to manage multi-locale content and feature flags and to drive dynamic UI through a schema-driven, JSON-based form engine.
- Integrated Google Analytics with a custom telemetry logger streaming interaction data to GCP, improving product insight and debugging.

Align – OKR-based employee performance platform Aug 2022 – Jan 2024

- Led development of the React, Material UI, Redux and React Query frontend; designed a library of reusable widgets that cut duplication and sped up delivery of similar views.
- Built and deployed an automated Microsoft Teams survey bot with Node.js, the Microsoft Bot Framework and Redis to collect real-time employee feedback.

Tata Consultancy Services

Jun 2021 – Aug 2022

Frontend Engineer | Hyderabad, India

- Modernized an enterprise application's UI from a legacy stack to React, Redux, Formik and Material UI.
- Rebuilt all screens to be responsive on mobile and tablet, with a clear improvement in Lighthouse scores.
- Consolidated several wizard-style forms into a single-page form, reducing the clicks needed to complete key tasks.

Broadridge Financial Solutions

Oct 2020 – Jun 2021

Member Technical | Hyderabad, India

- Co-built a Kanban dashboard in an agile team of six using React DnD for drag-and-drop and React Charts for live metrics.
- Developed interactive UI components such as animated progress indicators and responsive data graphs.

EDUCATION

B.Tech, Computer Science and Engineering Aug 2017 – May 2021

Padmasri Dr. B. V. Raju Institute of Technology, Medak, Telangana | CGPA 8.84

PROJECTS

SocialEase – social media app: Full-stack side project built while learning React, Tailwind CSS, Redux Toolkit and Firebase.
